Hi everyone,
I just joined and would like to say hello. Hope I can enjoy a few of the RTTY contests, I'm not into contests much but there's something about RTTY contests that I enjoy.

If anyone would like to schedule a QSO, I'm in CT eastern USA, please email me. I use BTL-RTTY soundcard software. Hope that doesn't upset the purists, but it's free and fun. :-)

29. Rule Changes for TARA RTTY SPRINT for 2002

Yahoo group: rttyfanclub
Date: 2002-11-30 22:41:37 UTC
From: mrbill19532000
Topic: 29 Message: 29

Greetings:

** RULE CHANGES AS OF 12/01/2002 **

TARA no longer requires you to submit your complete logs for review. Simply use our "OnLine Score Submission." Also, DX-Clusters & Spotting Networks may now be used by all participants. Please read the complete Rules & Regulations on our website at http://www.n2ty.org/rtty/rtty.html

) Single Operater, multiband - One person performs all operating and logging functions. As of 12/01/2002 the use of spotting nets (operating arrangments involving assistance through DX-alerting nets, etc.) is now permitted. Single operator stations are allowed only one transmitted signal at any given time.

B) **EFFECTIVE AS OF 12/01/2002** TARA no longer requires you to submit your contest logs for review. We have designed and implemented FAST & EASY web pages on the TARA web site to make electronic submissions a breeze! ALL submissions should be made at http://www.n2ty.org/rtty/rtty.html

ALL participants should keep a hard copy of their complete CONTEST FILES until the scores have been finalized. If we need additional information about your score submission you will be contacted directly via the e-mail address you have submitted on the new submission form. If it does become necessary for you to submit hard copy of your CONTEST FILES we recommend you follow the directions below. For those participants without an internet connect. You may submit your printed logs to the address supplied above just as long as you meet the deadline rquirement.

We hope you'll understand our position on this new system and the changes we've made. We ARE NOT trying to take our contesting any less serious. In fact we are trying to speed the process up if anything. In these days where computer viruses are too numerous and the amount of volunteers that are needed to complete this job are thinning, we believe this is our best possible solution. TARA believes that this system is much faster, and it reports to the contesters directly. In the event of any discrepancies we just don't have a few eyes reviewing the submissions we have hundreds of volunteers in each of you.

Thank You!
NY2U - Bill Eddy

77. FT-817

Yahoo group: rttyfanclub
Date: 2004-04-15 20:38:31 UTC
From: Bob
Topic: 77 Message: 77

Hello,

My name is Bob, KE4QOK, and I have just started doing a little RTTY on my FT-817 using MMTTY software.

I have become confused because the paperwork with the radio and with my software says that it should be run on LSB. This seems to work most of the time but the other day I answered a call and the reply, which may or may not have been directed at me, said the marks and spaces were reversed. I have also seen some sights on the internet that say all of the digital sound card software uses USB.

I have had a coule of QSOs with no mention of any problems with my signal so now I am thoroughly confused.

Heeeellllpppp!!!!!

I want to be sure I am not generating a reputation as an idiot...at least not on the radio.

Thanks.
73
Bob

95. 45.45 Baud

Yahoo group: rttyfanclub
Date: 2004-11-13 21:45:18 UTC
From: Henk Oegema
Topic: 95 Message: 95

20 years ago I build an ST/6W converter for a Siemens telex machine.
Have not used it the past 10 years. I am starting the hobby again.

My question: Is the speed 45.45 Baud still in use on HF (VHF ?)

20 years ago it was the standard speed. Has that changed?

73, Henk ON4HSO / PA2HO
http://users.telenet.be/henk.oegema

From: Henk Oegema
Topic: 95 Message: 97

Tnx Bob for your answer. I have to check what is wrong with my homebuild converter, since the tones aren't passing the filter. That was the reason is was asking for the speed. But since you confirmed that the 45.45 Baud is still in use, I don't need to change the bandwith of the filters and I don't need to change speed of the Telex machine.

The filter handles 850 Hz and 170 Hz shift and USB and LSB.
Bandfilters are designed for the range 2125 and 2295 Hz. Receiver
setup for no attenuation.
I will attach a signal generator to the converter and do some
testing.

73,
Henk, ON4HSO / PA2HO

103. rtty old equip question

Yahoo group: rttyfanclub
Date: 2005-01-01 14:07:48 UTC
From: barry whittemore
Topic: 103 Message: 103

I have a question involving old military rtty equip. A friend is a volunteer on an old navy ship and is interested in setting up the onboard station with RTTY but must use the origional equip that he thinks is 850 shift. does anyone know for sure if this can be used on the ham bands? also does anyone have any nuggets of info on doing this? i can get info on the equip if needed.
thanks

From: Joseph Squillace III
Topic: 108 Message: 108

New to RTTY.I'm doing a short research paper on RTTY to benefit those who are new to this mode. As I learn something I record it and move it into the document later. When I finish it I'll let the group review it and then it can be stored in the file section as a working document.

How's that for openers

124. Mystery RTTY Signal...

Yahoo group: rttyfanclub
Date: 2005-10-17 01:10:32 UTC
From: Brad
Topic: 124 Message: 124

Hello everyone, I just joined this group with the hope to solve a mystery. I live in the Mid-West and everyday, at different times, I hear an RTTY signal on 10.128 MHz that I cannot decode (with MMTTY). I have uploaded a sample of this signal to the files section of this group. The shift is 850Hz but I can't seem to decode it with any of the settings in MMTTY. Does anyone else hear this signal? Anyone know what it is or how to decode it?

Any advice would help. I know that 30 meters is a shared band... perhaps a different software program would work better?

Thanks in Advance,

Brad Cunningham, KL1IF
Broadcast Engineer

126. Re: [RTTY Fan Club] Mystery RTTY Signal...

Yahoo group: rttyfanclub

From: Brad
Topic: 124 Message: 126

Hi Bob. Well I hear it quite often... I have not kept a log but I will start keeping one starting now of when I hear it. I suspect it's some government stuff as I 'think' that is who we share 30 meters with. I have heard it durring both daylight and dark hours though on both my 30m vertical and multi-band inverted v antennas. When I get a few log entries I will post it here.

Thanks,
Brad KL1IF

128. FSK-1000

Yahoo group: rttyfanclub
Date: 2005-10-27 14:30:06 UTC
From: kc5hxk
Topic: 128 Message: 128

Hi group,
I have recently gotten back on the air after about a decade off and have purchased an FSK-1000 rtty t.u. Would anyone have a copy of the manual or schematic that they wouldn't mind emailing me? If there's a website where I can find it, please let me know. I've tried googling for it.
Thanks,
Marc

129. Install problem RTTY

Yahoo group: rttyfanclub
Date: 2005-10-29 13:50:08 UTC
From: Henk Oegema
Topic: 129 Message: 129

I have downloaded a RTTY program from
http://bellota.ele.uva.es/~jesus/rtty/

RTTY is a program that decodes FSK signals using a PC with a sound
card. RTTY runs under Linux.
I'm using SuSE 9.3

During the "make" command I get:

rtty_f.c:3:19: forms.h: No such file a directory
rtty_f_cb.c:1:19 forms.h: No such file a directory
rtty_f_main.c:3:19: forms.h: No such file a directory
make: *** [dep] Error 1

It's correct, because I don't have a file "forms.h" in my libraries.

However, I have "form.h"

Changing the header file "forms.h" to "form.h" in the files
rtty_f.c, rtty_f_cb.c and rtty_f_main.c only causes the "make"
command to produce a lot of errors. (too many, so I didn't include
them here)

Has anyone tried this program? If so, did you get it working or did
it also produce errors.

Any comments highly appreciated.

73, Henk

153. Question from a RTTY novice

Yahoo group: rttyfanclub
Date: 2007-03-09 04:17:20 UTC
From: w2pwe
Topic: 153 Message: 153

I'm able to find a lot of information about the technical side of RTTY and how to setup a station, but I'd like to learn more about the RTTY "etiquette" used in normal QSOs (if any) and in particular contesting especially with the sprint coming up. For example, it wasn't immediately obvious to me that "CQ TEST" was short for "CQ Contest" and not some station that couldn't decide if they were testing or actually calling CQ. I'm sure there are other standard practices that I'm not aware of. Anyone have a resource for this type of information?

Paul - W2PWE

Hello Steve,
thats quite an old unit. You could do a search of the web and see what information turns up. By the look of it the unit looks like it will demodulate the audio and present it at the serial port, i wonder if it converts from baudot to ASCII. I think you will need a pc with a serial port to drive it?
If you have a PC you could download MMTTY and start there as you can take the audio from the rig straight into the PC for demodulation.

Hi John,

Thanks for the heads up and the information. I am currently upgrading my computer to a new Intel Core 2 type cpu, so surrently off the air for digital modes. Putting the computer together myself.

So when it' up and running, will be running rtty and other digital modes using sound card programs, the AEA CP-1, AEA PK-900 and the HD-3030 if I can find suitable software for the Heathkit.

Hope to bump into you soon. Another friend of mine is active on rtty, his name is Charlie Ho, VR2XMT. You may have worked him?

See you soon.

Bob.

The audio FSK is transmitted and received on Lower Sideband, LSB.
The soundcard interface is USB, but not Upper Sideband, They are describing the interface, Universal Serial Bus.

Hope this is the answer your looking for.

Topic: 262 Message: 262

I had one of these in the 1980's and it was great. Just found one again. If memory serves me correctly, the unit puts mark and space data on the serial line to my PC as raw data. I then need a program to put it into baudot or ASCII. Can someone recommend a software program that will do that? MMTTY I believe works with a sound card that has already demodulated this into characters, if that is not correct, and MMTTY will put this together fantastic as I already have it. Your help is beyond appreciated.
Peter
